

gg::GgQuaternion::loadConjugate

```
graph LR; A[gg::GgQuaternion::loadConjugate] --> B[gg::GgQuaternion::GgQuaternion]; A --> C[gg::GgQuaternion::loadConjugate];
```

The diagram illustrates a function call `gg::GgQuaternion::loadConjugate` which branches into two possible return paths. The first path leads to a `gg::GgQuaternion::GgQuaternion` object, and the second path leads to another `gg::GgQuaternion::loadConjugate` function call.
